Game: How Many are Left?

Aim:

The goal of the game is to correctly guess how many counters are hidden. Players should be familiar with the dot patterns for numbers 1 to 10.

Equipment:

- Counters and a sheet of paper.

How to Play:

1. **Player 1 sets up a pattern**: Arrange a number of counters (1 to 10) and show them to Player 2.

2. **Cover the counters**: Player 1 hides the counters with a sheet of paper.

3. **Change the counters**: Player 1 either **adds** or **removes** 1 to 3 counters.

4. **Ask Player 2**: "How many are left?"
   - If Player 2 answers correctly, swap roles.
   - If Player 2 is incorrect, repeat the process until they get it right.

Variations:

- **Remove counters**: Ask, "How many counters must be removed to leave 1, 2, or 3?"
